

# Compostable carton

Plastic free Vine & Tree guards

**Plastic free compostable paperboard guards suitable for revegetation, horticulture and viticulture.**

## Description

The guards are made from plastic free paperboard that can fully biodegrade in backyard home compost or garden. The board has European TUV Austria OK Compost Home S1345 certification for home compost\*\*, ISEGA EN13432 certification for industrial composting\*\* and Institute Cyclos HTP En13430 certification\*\* for recyclability to support a greener and more sustainable earth.

The board makes the guards ideal to use as they are both recyclable and compostable, having done away with the traditional petroleum based coatings. Instead, the board uses new aqua dispersion technology to make a product which is both fully sustainable and plastic free.

Results of European testing by the board manufacturer through TUV Austria indicates that the board material can break down to CO<sub>2</sub>, water and biomass naturally\*.

Even though the guards are designed to break down, they will still last a season.

## Benefits

- Home compostable
- Industrial compostable
- Biodegradable\*
- Lasts well in the field
- Cost efficient
- Is a compact package when transporting, supplied flat
- No assembly necessary

\*excludes the adhesive used

\*\*according to board manufactures specifications
